DOC // 01 TECHNICAL DOCUMENTATION & HACKATHON PROJECT BRIEF

GigSure *AI*

Cross-border gig escrow, protected by AI.

A milestone-gated collaboration platform connecting African freelancers with international clients — powered by PayPal rails and Groq inference.

> Project brief prepared for the PayPal AI Hackathon judging panel.

This document covers the technical architecture, PayPal Orders v2 + Webhook verification integration, and the five production-grade AI features running on Groq (openai/gpt-oss-20b). It is written to be reviewable by both technical and non-technical judges, and clearly separates what is implemented today from what is planned on the future roadmap.
